Did you know that...?

IQcoloring.com

Octopuses are among the smartest invertebrates in the ocean. They can remember routes, solve simple problems, and learn from experience.
When an octopus feels threatened, it can change both the color and texture of its skin. This helps it blend in with rocks on the seafloor.
Each of an octopus's eight arms is covered with hundreds of suction cups that help it grip objects, open shells, and explore its surroundings.
An octopus has no bones. Its soft body allows it to squeeze through surprisingly narrow cracks in rocks, as long as its beak can fit through.
