Did you know that...?

Gentoo penguins are among the fastest swimmers of all penguin species and can reach speeds of over 30 km/h (19 mph) underwater.

Although penguins cannot fly through the air, their wings have evolved into powerful flippers, allowing them to move underwater almost like birds flying through the sky.

Gentoo penguins are easily recognized by their distinctive white patches above the eyes, which extend across the top of their heads, and their orange-red beaks.

When diving, penguins hold their breath and use their streamlined bodies and strong flippers to chase fish, krill, and other small marine animals.

Penguins have very dense feathers that, together with a layer of body fat, help keep them warm even while swimming in the icy waters of the Southern Ocean.
