1. Soil Preparation
The tractor uses a disc harrow to break up large clumps of soil and prepare the field for planting potatoes.
2
2. Planting Potatoes
A special potato planter places seed potatoes into the soil at regular intervals and covers them with earth.
3
3. Plant Growth
Green potato plants gradually grow from the planted seed potatoes. They need water, sunlight, and nutrients to grow.
4
4. Hilling Up Potatoes
The tractor pushes soil around the base of the potato plants, giving the tubers room to develop and protecting them from sunlight.
5
5. Potatoes Growing Underground
New potato tubers develop underground on special stems called stolons, gradually growing larger and maturing.
6
6. Potato Harvesting
A large potato harvester digs up the mature potatoes, separates them from the soil, and uses conveyor belts to transport them into a storage hopper.
